Wayne,You sent me some sketches for your 10 folded horn a little while back. Can you help me understand the orientation of the LF driver? I'm having a problem figuring out how the driver box fits into the horn. Would it be possible to modify this design to be shorter and deeper. I'd like something in the 30" to 36" height. I see that one person is sitting the 10 on it's side but this doesn't seem optimum for space efficiency. BTW, I'm looking for something horn loaded to sit an Oris horn on like Shanko is doing.Thanks!!Jim D.

Hi Jim!Did I send you the plans? If not, you may want to tell me your E-Mail address and I'll send you the plans. The woofer faces towards the folds, the first panel is sloped 45o from the face of the motor cabinet.I think it's a super combination with the Oris, as Shanko is doing.Wayne
