It's nice to see they are making up for years of mis-advertising the sensitivity specs on their drivers... Oh wait, they offset that but increased the power handling by 50%... :|Adam

I dont know what Eminence has done in the past but that page just shows sensitivity with frequency. And with all speakers sensitivity will change over the entire audio range.

They use to advertise general specs. The Kappa 15LF used to be spec'd at 101db/1w/1m, which is quite deceiving. The new system is definitely a lot better.Adam
