Hi Folks,I made a single 4Pi box some time ago, and now I want to use it forbass guitar. I've already bought carpet from PE to cover it, butcan't think of a good way to do a nice job on it. Does anyone havesome suggestions on how to accomplish this? The front will get grillcloth, and I'm planning on black metal corners from PE. I was goingto use 3M super 77 for the glue.Thx, Chris

I have built a number of carpeted boxes for dj gigs and used black/silver indoor outdoor carpet from Q Components in Canada. Have used the 3M spray, Lepages contact or Probond Contact cement(professional strength) with good results. Don't like white or green coloured contacts as they seem much too runny. Don't apply too heavyas it might soak thru the carpeting.

Thanks for the pointer. Some nice articles. My problem is that thebox is completely sealed, with a flush back. I've build a 1x1 framefor the front, so I can terminate the carpet in the front OK. Itsthe back that's a problem. I guess I'll wing it and do my best.This thing isn't on tour, just in the bedroom for now.Thx, Chris
