re: 4-pi 18 cabinets. Any recomendations as a replacement for the Eminence 2 inch 3003 drivers? Selenium 3300ti looks good on paper, to my eyes and reasonably priced at parts express. How about the B&C models - which one? Any word on an Eminence 2 inch replacement?

JBL and TAD both make excellent large-format compression drivers but they are considerably more expensive than Eminence product offerings.Eminence hasn't made an announcement yet about a new 2" exit driver. They have only stated that they are planning to introduce one to replace the PSD3003, but no other word as of yet.
