Hi I have been reading back in some old post and got interested in the audiophile series seven. The one sporting a 2245 a 2123 and the 2" driver horn. Could you please send me the plans Wayne, that would be really great.I have currently the 2245 and a midrange I might be able to use. Its a high sensitivity 8" focal audiom 8. Quite similar to the jbl 2118, just with a tad higher fs and a phaseplug. Anybody got anymore info on that unit ?. The focal lineup is a maze.CheersAnreas

Hi Thanks for the blueprints, am i correct in the asumption that the bass system is basicly a 200L reflex box playing into the corner? As far as I can see, there is absolutely no fancy innards in the horn?CheersAndreas

That's right - The horn is formed from the expansion from the apex of the corner outwards.There's more information about them in the post called "Cornerhorns,"
