I've been looking for a beginner DIY speaker project to get a feel for it. Something easy and low cost. It was recommended that I take a look at some of the smaller Pi Speakers. Unfortunately there's not a lot of helpful information on pispickers.com. Would anyone be able to direct me to a source that will provide more details on the speakers themselves. What do the cabinets of the Pi One and Two look like? Size? Specs?thanks,gar.

Look at the Price List on the main page- it has dimensions and some other basic info.The Pi one, Two, and Two Tower are very easy to build, sound great, and are one of the tremendous values in audio.

General specifications can be seen on the Price Sheet, found at the "Info" link at

Speakers web site and we should probably remedy that sometime. But there are several photos in various posts on this forum - Mostly photos uploaded of speakers that people have built with their kits and what not. Do a search here for "photos" and "pics" and you'll find several. Let me know what you think you might be interested in and I'll send you the plans.
