According to "Great Plains Audio," Altec specs for the 421-8H are as follows:Vas = 12.8ft3Fts = 32HzQts = 0.25Based on these values, PiAlign recommends a 3.2ft3 cabinet tuned to 48Hz using a port that's 7.5" long, 4.6" tall and 8.2" wide.Response is nice and flat with 60Hz f3 and 40Hz f10.If this isn't the driver you have, you might consult the Altec T/S Specifications chart at Great Plains Audio to obtain the specs you need.

..I think Jumpin is using another big round tractrix (Oris variant) loaded with PM2A's. Crossover around 140 hz. He hasn't answered because he is cutting panels for his 7Pi's!
