Finally figured out how to work Spice. This is cool! I'm feeling dangerous now! I've been changing the different values to figure out what effect each component has. By looking at the 2426/2370A frequency resonse graph it doesn't look like we need much to get them flat. Maybe 4 db over 4K or so?

Spice is wonderful, isn't it? Not so long ago, the same sort of graph required platting a bunch of manual calculations by hand. Yuk!
