Has anyone upgraded the Piezo tweeter with an efficient silk dome (reasonably priced unit) without redoing the cabinet volume and with a simple Xover? Any help or suggestion would be appreciated

Why do you want to do this? The tweeter doesn't affect cabinet volume because it is so small. I haven't listened to the KSN1038 unit before, but apparently it's pretty good with ~1% THD @ 4V. If you do replace it, make sure you're replacing it with a part of better quality otherwise there's no point. Parts Express has millions to choose from! www.partsexpress.com
