Hi thanks for responding. I do not know the model numbers but they are very small approx. 4 inch speakers incased with a metal grill. They also have lenses on them to direct the sound and the package comes with 2 of these small speakers and a sub. Also included is the 2 speaker stands and a carrying case for everything. I hope that helps or could not find them on the site are they possibly a few years old?

Hi Ty. Someone may have made a comment about PI DJ speakers but many models of Pi's use professional (read DJ) components. This means you need very little power to make a lot of sound, then to top it off you can put a lot of power into them (translation - you can make yourself deaf or fill a big room :-). What you might want to do is check the "price list" and click a few links. You will notice that some speakers are rated at 1000 watts. What you can't appreciate until you hear them is that one watt will fill most rooms in your house at what is considered "loud" levels. Many of Wayne's designs use "horns" which are more efficient than other speaker designs.

They can also be used to fill big rooms. Note that the price list shows Complete price and kit price. Most people that don't live close to Wayne order the pieces and buy the wood to make the cabinets themselves instead of paying high shipping costs. I hope this helps. Grant.

You are describing a speaker that was made by Music Industries around 1999. They made a federally registered trademark, and they immediately changed the name of this product to "Prime." I don't know if they are still in production or not. The company "Music Industries" has no relation proprietors are nice fellows, but their products are wholly dissimilar.
