If I bypass the tweeter inductor on a pair of pi studio series 2, will that make the tweeter brighter or give it more volume? (I dont hear hi end as good as I once did) Im running the pi 2 with a pair of old (70s) advents , each has there own sound, But they sure sound good when teamed up. R. WOOD

There is no inductor on the tweeter. The inductor is connected in series with the midwoofer, and shorting it will increase upper midrange output.

The pair of wires attached to that inductor should be connected to the woofer. The other pair of wires should be connected to the tweeter.
