I'm trying to rearrange the power to decibel equation. The equation is: $\text{decibel} = 10 \cdot \log(P1/P0)$ I need to rearrange it so P1 is on the left hand side of the equation. This is so I can determine the new power level (P1) given a decibel figure and old power level (P0) instead of given two power figures and finding decibel. I know graphics calculators can solve for each number without re-arranging, but I need this for a microsoft excel spreadsheet which cannot solve like that. So I need to rearrange. Can anyone help? BTW: Formula is from JBL Sound System Design Manual.

Subject: $P1 = 10^{(Db/10)} \cdot P0$ (nt)
