Hi Folks, I finally got my "mistake" drivers mounted in boxes and hung onthe wall. They are sort-of a 1 Pi corner thing. With the loudnessturned on, they go suprisingly deep. Not chest thumping, but nicefor moderate listening levels. I've posted several photos. I reallylike the "odd" wood I got from HD. I don't think I could have foundveneer as nice without trying hard. The finish is two coats of Triedand True varnish oil and one of wax. Trim is walnut to match the2 Pi's, center channel, and sub I made. The shelves were custom madefor this project. Surround 1 Pi's What I get accomplish is leaving them uncovered. While see them assmall, my wife thinks they are sort-of big, and aren't "done" untilI get grills put on. Anyone know where I can get blonde grill cloth?The drivers were a mistake because when I ordered them, I had meantto order the smaller Fostex for the center and got these instead.I just kept them.Chris

I hate to follow up my own message just for corrections, but thiswas too bad to not fix. :^)What I can't get accomplished is leaving them uncovered. While I see them as small, my wife thinks they are sort-of big, and aren't "finished" until I get grills put on. Chris

Cool stuff Chris! I like how they take up virtually no room too - kinda hidden on the wall. Did you find the whizzer cone on the Fostex there to cause any audible problems with the tweeter such as comb filtering etc?

> Did you find the whizzer cone on the Fostex there to cause any audible problems with the tweeter such as comb filtering etc?I haven't had much listening time, but so far I can't tell. The

Fostex do go up pretty high before rolling off, maybe 12K-14K. Thesound stage seems really wide (imaging?), so maybe there's something,maybe not. I'll get more time on them over the next few days soI can post more impressions. Maybe I'll try out the Berhingerreference mic I bought and see if I can graph them.Chris

Those are cool looking speakers and I like your design. The Fostex units that I've heard sounded very nice, so I suspect you've got a great pair of speakers there.

I used the 168 sigmas in my center - you can see it here:http://home.earthlink.net/~hwatkins/id63.htmI cross mine over before the whizzer can do anything, but I really have been pleased at their mid woofer performance in my modified Heresy center channel.
