Hi Wayne, On your site, it says that the dimensions for Two Pi towers is 46x16x13. Is it alright to go a "touch" bigger?? Is 48x14x15.5 OK? It's less than 0.5 ft³ (outside) I only ask because my friend and I want to build two different kits (won't name the other) to A/B for fun, and it would be MUCH easier to build two pairs of boxes exactly the same size. I realize they wouldn't be stock or "Pi-approved" then, but wasn't sure how much difference it would make. Thanks for your info. Can't wait to make some Towers! Rich

Sure, you can make them larger but be careful. Alignments like this are actually pretty sensitive to cabinet size and can get peaky in a hurry. Some alignments are pretty forgiving, but this one pushes the woofer as deep as it can. Those tend to get a bit less forgiving. So try to keep your internal volume the same.
