Hello, Wayne, could you send me the plans for the Studio 1 Speaker kit. I am very interested in buying the kit but I want to know how complicated the cabinet construction would be. I am looking for a small high output speaker and the studio 1 seems to fit the bill. Also what is the maximum continous power such speakers can handle. I have a 100 watt rms amplifier and would like to use the speakers for the ocassional house party. Thanks...my email is draco_rosa(AT)hotmail.comjust take out the (AT), replace with @, :)

If the plans exceed your Hotmail account size limits, please tell me an alternate E-Mail address and I'll be happy to resend.

Could you also include the plans for the 3 PI bass reflex stage kit. It looks like a viable option too, being just a little bigger than the 1's. Thanks...lnra54(AT)mizzou.edu

I've sent plans to your address at mizzou.edu. You might consider using a Magnum 12HO, which can be used in this design. You can also use a JBL 2206. The Omega 12 is a fine driver, but both of the other alternatives offer significantly reduced distortion levels because they are flux stabilized.

Leo,I built mine last weekend over the course of a day. If you don't have a tablesaw, or a good guide for a circular, have the shop cut the board up for you. See my self-promoting post below "New Addition..."And yes, they can go plenty loud.Gar.
