This is my first post here. I'm not new to diy speakers, but I am new to single drivers and tubes. I've built the following: 2 sets of Audax HT speakers 1 18" cylinder sub 1 12" sealed sub 1 set of MBOW1s 1 set of Dayton 2-ways I recently got the tube bug and ordered a Bottlehead Foreplay preamp kit and two really inexpensive S5 Electronics monoblock tube amp kits that make 8w each. If anyone is familiar with the S5, it is now available in monoblock form. I'll be implementing the S5 mods that are available on the net and building nice cabinets. My question: I don't know nothin 'bout buildin no single driver speakers. All I know is Fostex. I've also looked at the Adire HE10. Th 2-pi kit at \$60/speaker is almost a no-brainer. How can I go wrong with that? However, I really want to get some input from those in the know. Thanks, Jeff

driver speakers. I really like the Fostex 206e and the little Adire HE10.1 is nice too. But I prefer good choices. You really can't go wrong with any of them, especially when used with a system like you describe. Each is perfect for that system, and they all sound very good. Having said all it's a no-brainer.

Wayne, Thanks for the reply. Also, you are correct, I did read the post that you mentioned. Is there a place on this site with the plans for the tower? Thanks Jeff
