Is it one that are based on Wayne's plans?Is it some specific design philosphy that differs from others in some respect?If I put together a speaker based on some of the stuff I read here, should I ask for a Pi decal to put on it?What makes a "Pi-designed" speaker? What does this term mean?

>>Is it one that are based on Wayne's plans?Not necessarily. >>Is it some specific design philosphy that differs from others in some respect?Yes, follow the link and down at the bottom of the page, Wayne has a white paper on the theory.>>If I put together a speaker based on some of the stuff I read here, should I ask for a Pi decal to put on it?I'll let the master tell ya. >>What makes a "Pi-designed" speaker? What does this term mean?See Wayne's white paper like I said above.
Wayne's papers scroll to bottom of page

we've sold or licensed. The kits are a collection of parts, and we've essentially licensed the builder to build one speaker with them. There are probably some technicalities that I've oversimplified, but you get the idea.Like Bill said, I've always sort of considered any speaker built

loudspeaker. There are also other documents you'll find here that describe ideas integral to most

of a handful of loudspeaker configurations that are commonly discussed here. It's a style or

be built using information provided here.
