

Fresno,One option for upgrade would be to convert the Towers into a pair of Theater Three's. The volume between the Towers and the Three's are close enough and I'm sure your son would appreciate the improvements in the bass. The port will need to be resized. However, whether a 12" driver will fit on your baffle will depend on the location of your internal braces. Also, if you followed Wayne's intructions for baffle cutout on the Towers, you might be short about 1/2" for the compression horns. I know because I've tried.Gar.

If it were me, I'd stay with the Alpha 10. You might be right that power was exceeded, maybe by cranking the bass. But we could sure send them back to Eminence and see if they will warranty them.If the speaker was used outside its limits, Eminence won't warranty it. But maybe they would examine it and find something else, you never know. So we'd be happy to send it in for a warranty claim if you'd like.

How long is the warrantee on those puppies? I think I got them last summer. What is the procedure for returning them? Since only 1 is blown I'd want 2 new ones to avoid a mismatch.I was using a 35 WPC push pull tube amp, the bass was a bit boomy on some of my CD's but not most. His music cracked the foundation of the house next door :)

If I remember correctly, both spellings are correct. As for the matter at hand, just send 'em back to me and I'll send them on to Eminence. If they are able to warranty them, they will. I'm not sure I'd send the good one though. They won't warranty a good speaker. If there's a factory defect of some kind, you bet they will. But they won't send a matched pair or anything like that. New devices are expected to meet specs, and they are examined by QC but that's the extent of it. That does bring up an interesting issue though. Just like some people buy tubes in bulk and then test them to provide matched pairs, this could be done with loudspeakers also. Probably best to do it on the expensive devices, since the service would add considerable cost. But it is an interesting idea.

Ok, do I ship it to you or do I ship it to them? If they don't warrantee/y it, what would be your suggestion regarding going with the 12" (if it fits)? Assuming it would not be the best cabinet for the 12", would the 12" still be better than the 10" for the cabinet? Would the piezo electric tweeter fit well physically and sonically? Steve

Ship the driver to me, and I'll send it to Eminence. If they are able to warranty it, they'll send me a replacement and I'll send it on to you. If not, it's really not worth much so I probably won't ask them to ship it back unless you ask me to. As for a replacement, as I said, I think I'd stick with the original Alpha 10. You could go with a Delta 12LF, but you'll need to add a crossover and a compression horn. That would be a very nice speaker, if you're willing to spring for the extra cost.
