Could you please explain the differences between the Pi 5 and Pi 8 other than corner horn vs. bass reflex woofer loading? Such as: What is the size of the Pi 5? Do the two designs share components? The same crossover? If not the same what are the differences? What is the f3 cutoff for each design? Any other differences worth mentioning. Searching past posts from this forum has provided me with so much information on horns that I previously had no ability to obtain. I now understand many of the benefits of this type of loudspeaker. Again thank you for your help and thank you to everyone who has contributed to this forum. Best regards, Eric

It's horn loaded from the midrange up, and it works well in corners but doesn't require them.

Subject: Thank you Wayne,
