I have seen the midrange horn design here.Could I use this for PA use I guess the design is short throw. I would like to use a 12inch speaker with this design.It is 200rms. 100db for 1watt. 45 to 5000khz with a very flat curveover this freq.I would hope to get out of it 200 to 1.5 khz is this possible???many thanks to any one that can help.Philip Banyer

I'd use the horn in pairs if I were planning to use it for live sound production. Alternately, you might go with a larger single horn instead.
