I've totally got to see "The Day After Tomorrow." Today we had a record breaking low temperature in Tulsa, with a high in the low 70's and a low in the 50's. Makes you think...I still haven't seen the movie which is ironic because I'm a regular listener of Art Bell's radio show, "Coast to Coast." Art Bell was one of the authors of the book this movie was based on. He is not an environmental advocate of global warming at all, but wrote the story about cyclic weather changes such as those that thought to have caused the extinction of the dinosaurs and others that have happened on Earth through the ages.But whatever, it's a cool story for a cool summer day...
