Subject: 4 PI Pro and horn flares

Wayne,I am finally getting semi serious about assembly. I have the jbl drivers necessary for the 4 PI Pro (2225H and 2425H w/ 2370A flares) but looking at the dimensions I have realized that the 2370A does not fit the hole prescribed in the plans, and I really don't want them setting on top like my A-7 Altecs. So I ordered a pair of the eminence (H290 I believe) flares. Will these fit the jbl drivers I have? They are the type with screw on mounts, but I also have adapters that screw on and adapt them to either 2 or 3 bolt pattern. Hope I didn't jump the gun and order the wrong thing for my application. I asssumed that it would work, since the kit you sell does not specify a different flare if you order the JBL 2426 H option. Thanks, Cody

Eminence H290 horns have both 2-hole and 3-hole mounts, so JBL 2426's will bolt right up. Most people grind off some material on the outside of the flare to make access to the mounting bolts easier.
