Hi Wayne: It has been quite a while since I have visited your site as I have been involved with personal matters. I have some questions that were probably answered some time back in previous threads so please point me in the right direction to save yourself some typing. 1) Your previous designs were exclusively 2 way and you touted the latest and greatest JBL tweeters as having enough high end to eliminate the third speaker. Why are you now designing and selling 3 way systems? 2) Your high end speakers are corner loaded and have limitations in very large auditoriums (unloading). What happened to your front horn designs that seem more suitable for this purpose? Thank you for your time, Bill

Actually, all my original designs were three-ways, as shown in the PiAlign.doc. The drawings and formulas are really more of a description, or an outline, but the original speakers were all

making some large two-way systems and I really liked them. With the right components, you lose little but the cost. But I've taken the cornerhorns back to a three-way because I think it makes

oversized for the room. Sound great, but they are very imposing. Have you seen the new little
