I'm going to make a pair of One Pi speakers for a holiday project. I would like them to be more portable rather than less, but I don't want to botch the sound quality in the process. I'm thinking about maybe thick birch ply on the front and maybe back, and thin ply for the sides, with maybe some bracing for the thin ply. Ideas? Advice? Tales of woe?thanks,Walter Owens

enough that they don't weigh much even when made of MDF. The drivers aren't very heavy so if you make them out of a good ply, they'll be durable and lightweight.
