Just picked up a pair of these cabinets which are in good condition, but both woofers torn. They use a 12" woofer, 4 1/2" mid and a small horn tweet. Would any of the Pi speaker kits work in these cabinets?They are 26"Tx17"Wx15"D and 1" thick MDF, ported in the rear. I could cut as needed on the baffle. Would like it to be 95dB+ if possible. Thanks.

The Delta 12LF might work well in those cabinets, depending on the porting. Might be worth a try. But you might also check into reconing those speakers. It's generally pretty cost effective. Call David Miller at Speakerworks, (918) 664-6299.
