How's the S.E.X. kit - um - coming along? And how did you explain the S.E.X. part to your 8-year-old son (whose helping with the build)? I can't wait until you finish the amp. I am curious to see how it sounds on my Theater 4s. I guess I'll have to clean up behind the stereo rack before you stop by. It's been a while since I've been back there. I've got some Risch DIY CC89259 interconnects that are already burned in if you'd like to try them, too. Now, if I can only get my Tosh 3950 fixed in the next couple of days ... . You might need to bring a good source with ya just in case. I'd love to hear my system with a good turntable and phono pre (hint, hint). Let me know if you need anything with the build. I read in a previous post about your concern with the size of the Theater 4s. Wayne is correct, as always. They sound best against the back wall. Or any wall. That might help with the WAF.

I have completed the hardware assembly, but I'm thinking of painting the transformers before I start soldering. I will make a decision tomorrow. I'm very interested in how the amp will sound with the theatre 4's. I think it will make wonderful music. I have a Tosh SD-4960 that I have not mod yet. Waiting on some parts, but if I get a chance to work on it before I can get over I will. I will let you know how the build is going and thanks for the offer to help.

I'm no expert, but I would think you would want to paint before you solder. The pics on the Bottlehead site have the S.E.X. amp nude. No paint. And it looks good. I painted my Foreplay top plate and transformer with black hammerite. I love it. As far as modding your Tosh ... be very, very careful with the small pins on the ribbon cable. That's where my problems occurred.

I have not started to solder that is the reason I was thinking of painting it now. I'm just not sure I want to start taking things apart, especially since it went together so nicely the first time. I will make the decision today so I can move on with construct. The tosh player I have is the SD-4960. The design is a little different. I do not think I will have to worry about the ribbon cable. I will have worry about other things with the player mod.

I've been toying with the idea of making a S.E.X. since it seems like a great platform for modding and learning. I'd love to hear a comparison between the SEX and Paramours through the Theater 4s. Garland

The Bottlehead parafeed triode amps are entirely different products from the Heart ultralinear tube amps, so this is kind of apples and oranges. But they are in the same price range and I gotta tell you that the Stoetkit is one sweet little amp. I'm glad to have 'em both.

I'm still putting the amp together. This is my first kit and I'm taking my time and triple checking everything. Once I complete it I will be getting together newsjeff so we can listen to his Theatre 4's with my S.E.X. amp. I will post listening impressions.

Yes, please do post your impressions. I'd like to try one of those new little Bottlehead kits too; I have just about everything else they make. But right now, I have to many other things on the "to do" list to consider it.

I had the pleasure of listen to my Theater 4s with the new Bottlehead S.E.X. amp Monday. Please keep in mind that I am terrible at writing reviews. Also, I'm not sure the amp was fully broken in. Possibly less than 25 hours on it. The first thing I noticed about the amp: it's DEAD quiet. No hum or buzz whatsoever. Not even when I put my ear right against the horn with the amp turned up almost all the way. Black. If I could describe this amp with one word it would be precise. The reproduction of music was exact, almost clinical. The full spectrum of sound was fully discernible with no major flaws. If you like clean, honest sound, you'll love he S.E.X. amp. The music tracks on the Stereophile Test CD 3 made this amp really show the honest, detailed sound it's capable of reproducing. Volume level? I got 87db with my SPL meter at 15 feet from the speakers. This was with the amp turned about 3/4 of the way up. The bass was better than I expected, too. Tight and deep enough to get all but the lowest frequencies. Nice job, Doc, Paul and gang. If I was to fault anything with this amp, it would be the lack of dynamics. The amp just didn't give me the fast, lively sound that I really like. Live music from Dave Mathews with the volume turned up did get me going. Yes, it's there. But you gotta find it. The amp sounded wonderful on both sets of headphones I used, the Grado SR-60 and the Sennheiser HD-650. To be honest, I felt the S.E.X. was a much better headphone amp than an amp for driving my main, full-range speakers. Everything said and done, this is one great little amp. Espically for the money. If you into modding and/or experimenting, buy it now. If you are looking for great little headphone amp, put it at the top of your list. Nice job, Bottlehead. Speakers: Pi Theater 4Amp: Bottlehead S.E.X kitCD player: un-modded Toshiba 4960Speaker wires: Jon Risch CC89259 w/WBT Sandwich Spades. Interconnects: Jon Risch design 89259 w/Eichmann Bullet Plugs. Headphones: Grado SR-60 and Sennheiser HD-650

Thanks for the review! It seems in line with other comments on Doc's new amp; clean and precise, etc. Could you please let us know what amps you're using as reference? Thanks again. Garland

Garland, I don't think any of my amps are in the Reference category. Someday soon I will be able to afford the Welborne DRD 300B. Right now I'm pushing the Theater 4s with an 80s era Yamaha M-80 (200 wpc) and a Bottlehead Foreplay. You may think I'm crazy, but this combination sounds very dynamic and fast to me. The Foreplay tames the SS amp very well. And talk about some high db, that combo will get the roof shanking. However, I mostly listen at lower volume, and I really want a good S.E.T. amp for daily use. When it's time for the house party, that TANK of a Yamaha is going back in.

Comparing tube watts and transistor watts, or the subjective impressions thereof is a never-ending source of entertainment to me. I set my step-son on a an all-day head-scratcher with the following: In our downstairs home theatre lair. (Ha! A DVD player, 27 inch TV and whatever amp and speakers aren't busy!), I plunked down a pair of Audio Note AZ Two speakers driven by an M Zero tube pre and an Adcom (forget what model) 60 watt sand amp. Used cheap monster cable IC's and 18g zip cord. He was impressed. I wasn't. Pulled the pre and Adcom and subbed an Audio Note Kit 4 (10watt pp 6V6 amp w/vol pot). better overall tone, somewhat better bass extension and impact. He was more impressed. I could at least stand it. Subbed in AN Lexus interconnects and speaker cable. Huuuge change in bass impact, midrange intelligibility, imaging. It has stood as such ever since. Now he has his friends over to watch movies (Fast and Furious, XMen, etc), then tells them about the 10 watt amp.
