After a bit of break-in, all I can say is the motor-run caps in series with the compression driver is awesome! -Much more musicality and resolution. Complex musical lines are much easier to follow! You guys have to try them! Grainger and Newark have 'em.G.

Thanks for the tip. I will try them for sure. I have several parts coming from Kimber, Solen, Jantzen and Erse for a first test. I also plan to try a half dozen other brands. Last time I compared components was several years ago, so I plan to look at them again over the next few months.
