Hello, Just a little question here... My wife don't like the look of the corner horn and I don't want to lose the mid driver option... Do you think it is possible to mount a seven pi kit in a single box without mid horn and still have great sounding loudspeakers?? What about the size, port and crossover (timing), will everything stay the same?? Thank you! Michael

Uhhh... Sorry.... By "without mid horn" I mean : the driver will still be there, but not the horn!

I've made several that way, and they sound very nice. But I think the current version looks and sounds the best.

Does the crossover stay the same??

The crossover is different, but not much. The midhorn runs low enough that it's setup like a

two-way with a sub.

Actually, this might be a solution that would work for me. What would be the chamber volume required for the midrange?

It's designed to have an open back, or an arbitrarily large rear chamber. The lower limit is the rear chamber must be larger than 0.5ft<sup>3</sup>.
