Had/Having a hell of a time dialing in the Great Plains 902B's. The quality is obviously there but I'm stubborn. Details of the crossover tribulashyons below but I finally went to a .33 MPP cap from a .47 kicking and screaming 'cause it wasn't from Audience. But that was it! 14dB. And then I rolled the new JJ/Tesla 6DJ8's with the Sovtek 6922's and Svetlana 6N1P's. The JJ's are so neutral! And the voices and instruments just float up there. Almost have attained the unobtainable: "New York Tenderberry" on vinyl is MAGNIFICENT! I knew it was but never got the sound the engineers were after. Laura Nyro isn't a novelty, she's one of the Top Five artists of the latter decades of the Twentieth. Yeah! And the SACD done just before her death, "Angel In the Dark", Oh my!!

Oh, that sounds sweet. I sure wish you could bring 'em down. Shoot a pic of your latest project, will ya? We'll take some photos of the Tulsa bash too.

I got a couple of 6uF motor run caps from a surplus store for \$4(Cdn) each and replaced to polys I had in my Tangband single driver notch filter. They do would better! I never would have guessed that an "industrial" product can also have so much finess.

Local Grainger, that is and ordered a pair of 30uF's for my 1200 Hz X-over. Get them Monday, let you know.
