This isn't exactly on topic, but it is suitable for this forum (I'm ordering the speakers from Wayne, after all) What would be the Best replacement speaker for:  
<http://www.sonicsspeaker.com/djx183.htm> what's the best emergence replacement?

You'll need to know more information to do a good swap. Do you know box size and tuning?

Maybe measure the box and the port? Open it up and check for items inside that will displace internal volume too. You'll want to offset the displaced volume for any internal components, like for the woofer, midrange, tweeter and crossover. You can measure box dimensions and calculate volume, then knowing port size you'll know what the Helmholtz frequency is. Check those things and write back here.

They might tell you. But it's easy enough to check if they don't.
