Hi Wayne,I chose the precision devices PD107 as a cheaper alternative to the jbl2012 driver for my 3-way project. (I didn't need response below 300Hz either) I'd like to try a horn in the mids to see/hear what it does. Would my driver work ok in it ?its here btw:http://www.precision-devices.com/ShowDetails.asp?id=13Cheers!Rob

I haven't tested the driver, but most of the differences between drivers on this horn are above 1kHz. So that's what you'll want to look at, in regards to crossover for your tweeter.

Hi Wayne,Not a prob as I xo to a 90x40 horn at ~1300 anyway, and use digital crossovers.. I'll build one and give it a listen..Thanks for the quick reply ,Rob
