I've never built horns like these and the plans don't show any internal diagrams or bracing. I'm also still a little unsure about mounting the mid driver. I have built MBOW1, Audax HT, two cylinder subs and one sealed sub, Dayton 2-way, Buschhorns. Can someone post some construction photos of the Pi 8? Thanks!

Here are a couple links to helpful hints on the midhorn, which is the most difficult part of the cabinet. The rest is just a box, but do be sure to brace well. Midrange Horn Rubber Ball Brace
Please be sure to ask questions here for anything that confuses you. One of us is sure to lend a hand.

Jeff, I noticed that you used one port at the bottom. My plans were a bit different w/three (I think).

Thanks Wayne,I'll be using 3/4 MDF for the cabinet and even the internal bracing. Is the midhorn also 3/4 MDF or could that be 1/2"?

Yeah, I had the same plans with 3 square ports but preferred a round vent so i just calculated for that (same tuning freq.).Good luck on yours. You won't be disappointed.Jeff

You can make the midhorn out of 3/4" stock. When bracing, use a wedge shaped piece on the top and sides of the horn flare to give even greater rigidity.

Thanks again Wayne and Jeff. After seeing a few pics, I realized it is pretty simple to build. Now, I'm just trying to decided on whether I want to veneer them or wrap them with speaker fabric like Jeff's.
