Hi,I'm considering building a pair of Studio Tower IIs or Thermionic IIIs, and would like to view thier plans.I could use some help deciding on which kit would be best for my situation. Woodworking is not a problem, but i have limited experience with electronics. I can solder, that's about it.The room they will be in has limitations. It is a finished basement, approx 10 X 30 with a 6 1/2 ft fiberglass tile drop ceiling and rugs. The listening area places the speakers on the long wall about 7 feet apart, with a large opening to another space between them. I'll be using a 50w/ch (mc250) amp to drive the speakers. Thanks for your help.
