Hello, I am torn between the 2 Pi Towers and possibly the Theater 3 Pi for use with a 300b single ended amp ... but perhaps I should include the Thermonic 3 Pi into the equation also! So would you be so kind as to send me the plans for the Thermonic 3 Pi please. Of the three, which in your opinion is the better choice for a 300b (or possibly 2A3) amplifier in a small room and listened to at a distance of approx 8ft. Are the horns prone to beaming at such close quarters, or do they require more space around them. Many thanks in advance Wayne, Regards Derek

I like all three. If you were running a solid state amp, I could nail this down a bit more but with tube amps, there is more difference between amps. So the best thing to do would be to hear all three and decide for yourself.

speaker is more capable of high SPL. But running a tube amp, that isn't a consideration, whereas sounds good.

makes it tend to sound good on low power SET amps that might have trouble pushing the bass on other speakers. It also has a slightly underdamped alignment, which makes it provide useful bass response even when power levels are low and/or no boundary reinforcement is possible. This is a good speaker for use with amps like the Zen or in open spaces out away from walls and other boundaries.

Please tell me your E-Mail address and I'll send you the plans.

Subject: Thanks and my mail address is.....

Wayne, many thanks for the comprehensive reply. yes, please if you could send me the plans I would be greatful. ... my email address is as above - sorry I forgot it the last time!! once again

- thanksDerek

Subject: On the topic of impedance ...

I recently asked about the impedance characteristics of the various 4 Pi speakers, and their suitability for my 2A3 SET amps, but you did not respond. Could you provide some input regarding impedance of the 4 Pi's? Thanks, Jim D

Sorry, I can't imagine that I would have overlooked a question about impedance, but I've been very busy and maybe I forgot. There have been several discussions about this in the past, so the

the amp, it depends a lot on the output circuit, not just the tube. Some 2A3 amps will drive any
