Wayne, Because you said you were investigating the B&C drivers, I took a look at them and discovered that they offer several 2" outlet compression drivers. I remember the 4Pi 18 offerings you did with the PSD3003 and JBL drivers a while back and wondered if they might be an interesting basis for a 3-way with a supertweeter, partially inspired by (I think) Bill Epstein's experimentation with a standard 4Pi and 1" driver. Any thoughts on plusses and minuses? thanks, Skip Pack

Might be cool. The TAD 4001 sure sounded nice. I nixed the other speakers with 2" exit drivers because they had no top end.
