Hy. Wayne . regarding to the seven pi xover what if I go to use 25 watts rated wirtewound to R1,2,3,4 instead of the recomended 40 watts rating. also the values that madisound sell are very aproximate 3.9 ohm (R3) instead of 4 ohm and 8.2 ohm to (R4) instead (8.0 ohm) . could buy only the seven pi xover from you Wayne . please quote me .thanks BTW Im planning to use the Alpha 10 as mid-driver.Thanks

You can build-up the crossover however you like, but I don't recommend wire-wound resistors. The better non-inductive types aren't that much more expensive. What I suggest is to use a block of four 10 watt resistors to form a 40 watt network having the required value. If you want a fully assembled unit, I would be happy to sell you the crossover you need for $100.00 plus S/H.

Crossovers are $100.00 each. The large coil is an Erse iron core. Shipping to zip code 78245 will be less than twenty bucks.
