Wayne,I am planning to make my Four-Pi modular by putting the 2226 woofer in a 3.0 cu ft Parts Express subwoofer cabinet. If I put 4 x 1.375-in ports in the corners of the front face, WinISD says each port should be 2.91-in long for 40 Hz tuning. Does this square with what you would calculate?Craig Vogel

The vent area sounds about right, but I think each port should be longer, around 8" - 10". The Pro 10" long.

Thanks, WayneIt's always bothered me that WinISD gives shorter lengths for multiple ports with a cumulative area equal to a single port. Your answer makes a lot more sense.ccvogel
