Are there plans available for wood hf horns? If so, could you send them to me to suit pi
8Cheers, Paul, Aus.

We're hoping to have the tweeters ready for production in the next couple of months but no drawing or assembly plans are available. They will only be available as finished ready-to-use tweeter horns.

Back in mid November 2005 you emailed out wood hf plans to several forum participants who requested them. I am concerned about freight costs to Australia for built up items. Paul.

You're right, I do have plans packaged for distribution. I must be getting old, sorry.

Hi, Never mind Wayne, your posts are the Best (Speaker Posts of the Web). Keep it going. My congratulations for your work, and thanks. Your work is a Work of Art. As I said before, I don't know if I would buy a tweeter horn from you or if I would build one and learn from it. It's a difficult win-win decision. Good luck for your next convention/expo or show at Great Plains Audiofest - May 5, 6 and 7, 2006Tulsa, Oklahoma. It must be great. I have been there for a few Wine Festivals in Maryland.Regards

Wayne, how will they differ from the wood tweeter horns you now offer on the Pi speakers web site? Appearance? Price? Performance?

Wood horns that I've sold in the past were made by Bill Martinelli. They're a pretty good horn, but the sides are curved and the top and bottom are straight. The expansion is fine but I don't like that profile. The new horns have straight side walls and the top and bottom flares are curved to create the area expansion and to open much wider and reduce diffraction.

Hi,After paying attention (and learning from it) to some of the work done by Wayne (and others) I found a very interesting Patent (#4,469,921) from Kinoshita, 1984, with a "similar" horn design.<<Sectoral horn with side walls linear and opening degree or angle of the horn adjusted by the upper and lower curved walls>>The interest of this is that it explains how a type ""shelf"" frequency response of the horn becomes flat and directivity is improved in the necessary frequency band. With a two angle throat for different frequencies.Nice.

Horn type loudspeaker - US Patent 4469921

Yes, we've discussed this horn a lot over the years. I think its a great way to shape the flare, particularly the driver/throat transition.

I had planned to do that but I don't think Brad will be ready with them. It is a bit of a

may slip on the GPAF deadline for unveiling the tweeter horns. You'll definitely get a chance to hear them at one of the nearest audio club meetings this summer though.
