Here they are minus enclosure finishing.<http://consigliere.freewebsite.org/Pi2.html> I decided to go ahead and brace the hell out of the enclosure for fun. They are very tight sounding. I had no problems installing the components except that the tweeter measurements in the plans are wrong. The plans say the mounting hole is 2 and 5/8ths, 2 and 7/8ths is more like it. Nothing a router couldn't fix in a hurry. I like the new tweeter better than the old piezo one. These speakers still sound great. The bass is as good as I remember it with the old ones. Matt

Nice touch with the caulking for an air tight seal. A lot of building would not think of that.
