Here is my (almost)finished Stage 4Pi(missing the grill). It sounds GREAT! It has more authority, deeper bass, and fuller sound than the well regarded 2Pi Tower.I decided to mount the horn outside the box and the vent to the back baffle. This gave me more height without changing speaker box demension.I also used 10uF and 8uF motor run caps in place of polyprop ones. I tried both caps and found motor run caps provided "slightly" fuller sound. I would like to thank both Wayne for providing the speaker plans and GarMan for his many helpful emails.Cheers.Norberthttp://home.cogeco.ca/~nlee137/speakers/4Pi-stage-mod.JPGhttp://home.cogeco.ca/~nlee137/speakers/4pi-Xover.JPG

Subject: Excellent!
