Thanks for the compliment! The dimensions are stock interior dims. but the outside dims are 1/2" larger front to back since I added a 1/2" layer of MDF to allow for the grill covers. The Speakers are also raised by about two inches with spikes mounted underneath a wood riser ring on the base.Garland

Peppennino, are you referring to the 3pi's that Garland modified to be a "tower" type cabinet?

Sorry, I'd love to take credit for the 3's but I've yet to build a pair of those! Only a pair of 2's and a Pi derived three way for friends.G.
