Hello. Just a quick question regarding port for the 2 Pi Tower model.¿ Should I increase port diameter by 1/8" for every 1/8" increase in lenght (panel thickness)?¿ Or is there a formula for achieving required diameter for a given lenght? Thank you very much, Claudio

For 5/8" wood stock, cut a 4.5" diameter port hole. For 3/4" stock, cut a 4.625" hole. For 1", cut the hole 4.75" dia.
